Grade Level: 3 - 7

Customer Reviews

We have bought just about every book in this set. My kids absolutely love them and bring them with us everywhere. there's always one in the car, one in the church bag, you name it. the back inside cover has a picture listing of the books in this series and my boys are always quick to point out which ones we don't have yet.... so we go to to buy them!

The book covers the subject thoroughly, but often does not explain or define the scientific terms it uses. Instead, the reader must refer to the glossary at the back of the book, which disturbs the flow of the narrative. Since it is intended for children, I would have preferred that terms were defined in the text, as well as in a separate glossary. Otherwise, the book is well written, organized well and up-to-date.

A great book for my 9 yr. old grandson, full of detailed pictures in beautiful color. I think this book will open his mind to new information about this amazing earth that God created. I rate this book 5 stars!

Beautifully detailed and illustrated from a true expert in the field. Remarkable amount of information in a concise and easily understandable text.

My eight year old son enjoyed reading all the series including this one. It is part of his library collection, always excited to read (with some assistance) and share with his siblings.

This book was great. It gave me a lot of information for my own Volcano book.
